

## INDUSTRIAL

Platform heights from **1250 mm to 3750 mm**

Industrial mobile safety step, having a fully welded rigid construction. These steps are ideally suited to many industrial environments, from construction to warehousing. Their ergonomic design offers a reliably strong and robust step that is both easy to manoeuvre and safe to use. Independently tested by a third party to a safe working load of 300kg.

Range from a 5 to a 15 tread and manufactured from 25mm tubular steel, steps are immobilised by a central fail-safe retractor mechanism which when operated performs the dual function of acting as a braking system and at the same time forming a 'NO ACCESS' barrier across the steps; thus protecting the safety and welfare of your operative when using the equipment. The retractor gate is designed to lock the handle in position and is extremely light and easy to operate. Fitted with large rubber wheels and castors for easy single operator manoeuvrability and enhanced stability. All sizes have a large working platform area of 550mm x 400mm, with an all round kick board for added safety.

## LIGHT WEIGHT

Platform heights from **500 mm to 1500 mm**

Utilising 19mm steel tube for a lighter step, this version is identical to our Industrial Range with exactly the same working load of 300 Kg making them ideally suited to light duty warehouse or office environments.

2 - 4 tread models use spring loaded self weight retractable castors; step onto the step and the rubber feet impact on the floor to immobilise the step to give maximum stability.

5 - 6 tread models are fitted with a central braking system and fixed rear axle with 150mm rubber tyred wheels.

## NARROW AISLE

Platform heights from **750 mm to 2000 mm**

This popular step is a variation on the Light Weight range having a reduced tread width of 400mm, it is designed for use where space is at a premium. All narrow aisle steps have Anti-Slip PVC treads for maximum grip.

3 - 4 tread models are fitted with four spring loaded self weight retractable castors and four rubber feet. This enables the step to turn within its own space.

5 - 8 tread models are fitted with a central braking system and fixed rear axle with large rubber tyred wheels.

## STEP-OVERS

Platform heights from **500 mm to 750 mm**

Designed for use in restricted areas these steps are fitted with spring loaded self weight retractable castors, step onto the step and all four rubber feet impact with the floor to immobilise the step and give maximum stability.

With Anti-Slip PVC treads for maximum grip, and side handle to give support when required.

## KNOCK-DOWN

Platform heights from **1250 mm to 3750 mm**

Designed for ease of transportation and access into height restricted areas. This easy assemble version of our Industrial Range of steps has been subjected to the same stringent design, safety and ergonomic testing.

Once located in your premises this unit can be erected within minutes, with minimal effort.

5 - 15 tread models are fitted with a central braking system and fixed rear axle with large rubber tyred wheels.

## EXTRA WIDE

Platform heights from **1250 mm to 3750 mm**

Having an identical fully welded design to the Industrial Range but with 700mm extra wide treads, this range has the space for carrying tool boxes and equipment for maintenance or allows easier order picking of bulkier items.

With a large sized working platform of 700 x 400mm.

5-15 tread models are fitted with a central braking system and fixed rear axle with large rubber tyred wheels.
